

## INFINI

### TREATMENT PATIENT CONSENT FORM

Patient Name: \_\_\_\_\_

I understand that INFINITM treatment (micro-fractional radio frequency) is intended for treatment of skin rejuvenation, wrinkles, acne scars, skin tone and skin texture and that treatment is commonly performed over facial and non-facial areas.

Will you receive INFINI MFR treatment?

INFINI MFR treatment renews skin cell by inserting micro-needle and exposing RF energy in dermis layer.

Short-term side effects such as redness, swelling, bruise, mild burning sensation or fine crusts of the skin are not uncommon. Pinpoint bleeding may also occur depends on patient skin condition.

Will you receive INFINI SFR treatment?

INFINI SFR treatment improves skin tone by exposing RF energy in skin surface. Short-term side effects such as redness, swelling, mild burning sensation or exfoliation of dead skin of the skin are not uncommon.

The downtime for recovery can be minimal to as short as a weekend. Downtime may be longer for deeper treatments or for certain combination treatments.

I understand that clinical results may vary depending on my response to surgery and my compliance with pre and post treatment instructions.

I understand that no guarantee has been given to me with regard to the percentage of improvement of my skin and that more than one treatment is recommended to achieve the desired results.

With this in mind, I am choosing to undergo

Full-Face \_\_\_\_\_ Facial Region \_\_\_\_\_

Neck \_\_\_\_\_ Armpit \_\_\_\_\_ Other \_\_\_\_\_

I have read and understand this form and my questions have been addressed and answered to my satisfaction. I have read pre-treatment considerations and post-treatment instructions and I will follow the recommendations outlined to protect my skin.

## INFINI POST TREATMENT CARE INSTRUCTIONS

1. Please avoid hot showers or saunas on the day of the treatment (gentle washing only).
2. You may feel a burning sensation for 1-2 hours after treatment. In this case, cooling with ice packs can provide relief for the treated area. Please make sure to wrap the ice pack in a clean and dry gauze or towel to prevent water from the melting ice permeating into the treated area. Alternatively, frozen gel packs may be used, but still wrap them in gauze or a towel to prevent direct contact between the gel pack cover and the skin.
3. Pinpoint bleeding is a normal skin reaction on the day of the treatment. You need to gently press the areas with clean cotton pads to stop the bleeding.
4. Washing the treated area, using make up, shaving and showering are possible on the day after treatment. Applying a moisturizing mask pack or using a moisturizing spray in the morning and evening may help to reduce the downtime (swelling [edema] and redness [erythema]).
5. In rare cases, the overall skin tone may become darker with crust formation from 1-2 days after a treatment. You do not need to be concerned, as this is the normal process.

6. Do not forcibly scrub or remove epidermal debris. Please leave them to exfoliate naturally. Never use scrubbing agents or exfoliants.
  
7. Avoid using alcohol-based cosmetics for at least 2 weeks after the treatment. Use moisturizing agents frequently.
  
8. Avoid vigorous activity, alcohol consumption, exercise and sauna for at least the first week post treatment.
  
9. Apply a UV-A/B sunblock with an SPF of 30+ regularly, and when outdoors, always use an umbrella, cap or any other available protection against sunlight as UV from the sun, even on a cloudy day, may cause hyperpigmentation of the treated area.
